## Boeing Delivers 3rd Australian F/A-18F Super Hornet Ahead of Schedule

## Boeing Delivers 3rd Australian F/A-18F Super Hornet Ahead of Schedule

**ST. LOUIS, Nov. 5, 2009** -- Boeing [NYSE: BA] today announced that it delivered the Royal Australian Air Force's (RAAF) third F/A-18F Block II Super Hornet three months ahead of schedule on Sept. 30, after completing production on the multirole fighter at Boeing Integrated Defense Systems' St. Louis facility.

Boeing publicly debuted the first of the RAAF's 24 Super Hornets in St. Louis on July 8. Each of the three completed aircraft has been delivered three months ahead of schedule.

"We look forward to continuing to deliver Australia's newest combat aircraft on budget and ahead of schedule, as promised," said Carolyn Nichols, Boeing F/A-18F program manager for Australia. "Successful early delivery of these aircraft is a direct result of the great teamwork between Australia's Defence Materiel Organisation, the Royal Australian Air Force, the U.S. Navy, Boeing and the entire Hornet Industry Team."

The remaining RAAF Super Hornets, each equipped with the Raytheon-built APG-79 Active Electronically Scanned Array radar, will be delivered through 2011.

"The Block II F/A-18F Super Hornet will provide the RAAF with an enhanced air combat capability across the spectrum of missions, with a twin-engine design that is ideal for our maritime operational requirements," said Group Capt. Steve Roberton, Head Air Combat Transition Office, Royal Australian Air Force.

Australia became the first international Super Hornet customer in March 2007, when the Australian government announced its intent to acquire 24 of the fighters.

The Block II F/A-18E/F Super Hornet is a multirole aircraft able to perform virtually every mission in the tactical spectrum, including air superiority, day/night strike with precision-guided weapons, fighter escort, close air support, suppression of enemy air defenses, maritime strike, reconnaissance, forward air control and tanker missions. Boeing has delivered more than 410 F/A-18E/Fs to the U.S. Navy. Every Super Hornet produced has been delivered on or ahead of schedule.

A unit of The Boeing Company, Boeing <u>Integrated Defense Systems</u> is one of the world's largest space and defense businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Boeing Integrated Defense Systems is a \$32 billion business with 70,000 employees worldwide.
