## Boeing Delivers F-22 Training Center with Advanced Visual System

**ST. LOUIS, Jan. 8, 2015** – Boeing [NYSE: BA] has improved the realism of ground-based F-22 Raptor training by delivering the first simulators for that aircraft with an immersive, 360-degree visual environment.

Two simulators were installed, each paired with the Constant Resolution Visual System (CRVS), Boeing's patented display that provides high-resolution imagery for pilots to train with nearly 20/20 acuity.

"Boeing has delivered what are probably the most advanced high definition flight simulators I have experienced, and they are going to let our pilots realize training unlike any they've had before," said Air Force Col. Anthony Genatempo. "That translates directly into mission readiness."

This latest F-22 mission training center delivery is the fourth of five mission training centers ordered by the U.S. Air Force. The fifth will be installed this year. Boeing will upgrade the previously delivered F-22 mission training centers with the CRVS as well.

The F-22 mission training centers also include instructional courseware, software and brief/debrief stations where student pilots can review recordings and data with an instructor.

A unit of The Boeing Company, <u>Boeing Defense</u>, <u>Space & Security</u> is one of the world's largest defense, space and security businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft.
