Cellular Wing Technology Developed by Boeing: Video News Release

A video news release detailing new Boeing-developed, airplane-wing technology is now available for your use. Cellular wing technology could revolutionize how aircraft -- particularly military aircraft -- are manufactured today. The cellular wing structure allows airplanes to continue flying, even after being hit by anti-aircraft fire.

For more information, or to receive a videotape and/or VNR transcript, contact one of the inidividuals listed below.
