

Technical Problem Delays Boeing Delta II Launch for Iridium System Satellites

The detection of vapor during the loading of propellant on the upper stage of a Boeing Delta II rocket has delayed Sunday's, April 26, launch for the Iridium system from Vandenberg Air Force Base, Calif. A new launch date will be established as soon as the issue is resolved.

The Iridium system is a global wireless communications network that will combine the worldwide reach of 66 low-Earth-orbit satellites with land-based wireless systems to enable subscribers to communicate using handheld telephones and pagers virtually anywhere in the world.

Iridium is a registered trademark and service mark of Iridium LLC " 1998.
