

Air Power for the 21st Century: The Boeing JSF and the F-22 Raptor

The Boeing-designed Joint Strike Fighter will fully and affordably complement the F-22 Raptor for the U.S. Air Force. The company's "total-system" approach will modernize the service's tactical forces at the lowest cost, while providing a system that surpasses current aircraft in performance, mission effectiveness and supportability. The Boeing approach to open-systems architecture and designed-in growth capacity will permit its JSF to remain at the cutting edge of technology for decades to come. Together, the Boeing JSF and the F-22 Raptor are defining 21st Century Air Power for the U.S. Air Force.
