Kenya Airways First To Operate 737-700 With Blended Winglets

Kenya Airways became the first airline anywhere in the world to operate a 737-700 with blended winglets. Kenya Airways is expected to put the airplane into service later this month. The airplane will be leased through GE Capital Aviation Services. "Our goal is to become the premier airline of choice in Africa and provide more frequency for passengers," said Isaac Omolo Okero, chairman for Kenya Airways. "The 737's economics and low maintenance cost will help us continue to provide the best service to destinations throughout Africa."
