

New Boeing Thrusters to be Integrated with Missile Defense Weapon

New Boeing Thrusters to be Integrated with Missile Defense Weapon

Boeing's new Divert and Attitude Control System (DACS) is shown here in a live "hot-fire" test, demonstrating how it would perform when installed in a Terminal High Altitude Area Defense (THAAD) weapon. The system was recently delivered to THAAD integrator, Lockheed Martin. When deployed, THAAD will be part of the nation's missile defense system.
