

Connexion by Boeing Teams with Rockwell Collins to Bring High-Speed Connectivity Solutions to Business Aviation Market

Connexion by Boeing Teams with Rockwell Collins to Bring High-Speed Connectivity Solutions to Business Aviation Market

Connexion by BoeingSM and Rockwell Collins today announced a strategic agreement that will provide new high-speed connectivity solutions for the corporate aviation market. Unveiled at the National Business Aviation Association conference in Orlando, the new service, "Collins eXchange," will combine the robust, real-time communications capabilities of the Connexion by Boeing broadband network with Rockwell Collins' extensive experience in business aviation.

While specific terms of the agreement were not announced, Connexion by Boeing will provide the enabling technology that provides two-way high-speed connectivity and manage the network and satellite assets, while Rockwell Collins will provide and install the antenna, manage the airborne system installation, vendor relations and customer-facing activities including marketing and sales. Connexion by Boeing will manage sales and marketing to government customers.

Potential platforms include super mid-size and larger aircraft. The Connexion by Boeing service is already in use in the United States on executive jet platforms the size of a Boeing 737 and larger.

"We are pleased to bring our shared vision for high-speed connectivity to the business aviation marketplace in conjunction with Rockwell Collins," said Connexion by Boeing Vice President of Business Strategy Sean Schwinn. "Business leaders today have an increasing need to be aware of world events as they unfold and a way to respond if necessary. Working together, we will address that need with a technology-based solution that provides the tools necessary to be both informed and productive in flight."

Installation of the Collins eXchange systems are expected to begin in mid-2004 for commencement of service in early 2005 with service availability on a majority of the global routes flown by business operators. The service will use the same satellite assets and network operations center used by the Connexion by Boeing service for the commercial airline market.

"In today's data-rich environment, people want the same access to information and entertainment while onboard an aircraft as they have on the ground," said Bob Chiusano, executive vice president and chief operating officer of Rockwell Collins Commercial Systems. "Rockwell Collins' aircraft technology matched with Boeing's broadband leadership provides an ideal solution."

Corporate aviation operators and their passengers can use Collins eXchange to access the Internet and firewall-protected corporate intranets, send outgoing emails or open large attachments from incoming emails; get the news, weather or destination information; or view direct broadcast television programming. The service will also enhance air-to-ground communications for flight crew personnel.

Connexion by Boeing, a business unit of The Boeing Company (NYSE:BA), is the mobile information services provider bringing broadband Internet, data and entertainment connectivity to mobile travelers. The Boeing business unit recently announced definitive service agreements with Lufthansa and Scandinavian Airlines System (SAS) to equip their fleets of long-haul aircraft with the service beginning in early 2004. In addition, British Airways has completed a successful service demonstration, and both Japan Airlines and All-Nippon Airways have announced their intent to install the Connexion by BoeingSM service on its long-range aircraft. Rockwell Collins is a leader in the design, production and support of communications and aviation electronics solutions for commercial and government customers worldwide. For additional information visit the Rockwell Collins web site.

Forward-Looking Information Is Subject to Risk and Uncertainty

Certain statements in this release contain "forward-looking" information that involves risk and uncertainty, including projections for new business and new business opportunities, compliance with delivery schedules, current and future markets for the Company's products, and decisions regarding production of Company products and offering of Company services. This forward-looking information is based upon a number of assumptions including assumptions regarding current and future demand for the Company's products and services; internal performance; product performance; customer financing; customer, supplier and subcontractor performance; favorable outcomes of certain pending sales campaigns; supplier contract negotiations; government policies and actions; and regulatory approvals. Actual future results and trends may differ materially depending on a variety of factors, including the Company's successful execution of internal performance plans, including continued research and development, production rate increases and decreases, timing of product deliveries and launches, supplier contract negotiations, acceptance of new products and

services, product performance risks, the cyclical nature of some of the Company's businesses; volatility of the market for certain products and services, actions by regulatory agencies, other regulatory uncertainties, collective bargaining labor disputes; performance issues with key suppliers, subcontractors and customers; governmental export and import policies; factors that result in significant and prolonged disruption to air travel worldwide; global trade policies; worldwide political stability and economic conditions; the outcome of political and legal processes, including uncertainty regarding government funding of certain programs; termination of government contracts due to unilateral government action or failure to perform; legal, financial and governmental risks related to international transactions; legal proceedings; and other economic, political and technological risks and uncertainties. Additional information regarding these factors is contained in the Company's SEC filings, including, without limitation, the Company's Annual Report on Form 10-K for the year ended 2002 and the Company's Quarterly Report on Form 10-Q for the quarter ended July 31, 2003.
