Progress on New Boeing 777 Freighter Continues

The new 777 Freighter will be the world's longest range twin-engine freighter with a range of 4,895 miles (9,065 km). The new cargo airplane is based on the 777-200LR Worldliner (Longer Range) passenger model and will share many of the same advanced features of the 777 family of airplanes such as a state-of-the art flight deck, fly-by-wire system and an advanced wing, including raked wingtips.
