

Boeing Begins Delivery of New AH-64DHA Apache Longbows for Greece

Boeing Begins Delivery of New AH-64DHA Apache Longbows for Greece

The Boeing Company [NYSE: BA] has begun the delivery process for 12 new AH-64DHA Apache Longbow helicopters being produced for the Hellenic Army in Greece.

The aircraft are part of a combined Foreign Military Sales agreement with the U.S. Army and direct commercial agreement with Boeing. All of Greece's next-generation Apaches will be delivered this year.

In addition to its new Apache Longbows, the Hellenic Army operates a fleet of AH-64A Apaches, which have been in service in Greece for the past decade.

Boeing is producing the new AH-64DHAs for Greece at its Mesa, Ariz., rotorcraft facility.

"Boeing and the Apache team have enjoyed an outstanding relationship with the Hellenic Army for nearly two decades," said Al Winn, Boeing vice president of Apache Programs. "The Apache Longbow is an important asset for the Hellenic Army and a product that will have Boeing's full support through the life of these aircraft."

The AH-64D Apache Longbow features numerous enhanced capabilities, including longer-range weapons accuracy and all-weather/night operations, integrated sensors, networking and digital communications for situational awareness, and real-time combat management.

Since the Apache's inception, Boeing and the U.S. Army have used incremental technology insertions at regular intervals to ensure that the world's most capable multi-role combat helicopter meets the needs of current and future defense forces.

Eleven nations, including the United States, operate or have selected Apache helicopters for their defense needs. More than 1,600 Apaches have been delivered.

A unit of The Boeing Company, Boeing Integrated Defense Systems is one of the world's largest space and defense businesses. Headquartered in St. Louis, Boeing Integrated Defense Systems is a \$30.8 billion business. It provides network-centric system solutions to its global military, government, and commercial customers. It is a leading provider of intelligence, surveillance and reconnaissance systems; the world's largest military aircraft manufacturer; the world's largest satellite manufacturer; a foremost developer of advanced concepts and technologies; a leading provider of space-based communications; the primary systems integrator for U.S. missile defense; NASA's largest contractor; and a global leader in sustainment solutions and launch services.
