

Boeing Successfully Tests First SBInet Mobile Sensor Tower

Boeing Successfully Tests First SBInet Mobile Sensor Tower

SBInet's first integrated mobile sensor tower tested successfully in Fort Walton Beach, Fla. The tower houses cameras, radar, wireless data access points, communications and computer equipment, and a tower security system. When combined with Border Patrol agent vehicle modifications, the mobile sensor towers will provide surveillance data to the Common Operating Picture, a critical component of U.S. Customs and Border Protection's comprehensive border security solution.
