

Boeing C-17 Aircrew Training System Goes Into Operation at Dover AFB

ST. LOUIS, Dec. 11, 2008 -- The Boeing Company [NYSE: BA] and the U.S. Air Force held a ceremony Dec. 5 to mark delivery of the new C-17 Aircrew Training System (ATS) to Dover Air Force Base (AFB), Del. The ATS began operation on Nov. 21 -- more than four months ahead of schedule. It provides training to C-17 Globemaster III airlifter crews from Air Mobility Command and Air Force Reserve Command.

"In the past, aircrews at Dover had to travel to McGuire AFB [N.J.] and the Air National Guard base at Jackson [Miss.] to meet their training requirements," said Mark McGraw, Boeing vice president for Training Systems and Services. "By delivering this capability to Dover, we are able to save the customer time, money and aircrew availability."

"It's great to just walk across the street to do the training. Finally, it feels like we are at a C-17 base," said Air Force Chief Master Sgt. Jess Windsor, Evaluator Loadmaster, 326th Airlift Squadron.

Boeing has developed, operates and supports 10 U.S. C-17 ATS sites and expects to expand to three more within and outside the United States by 2010. With a tradition of successfully delivering C-17 aircrew training to the U.S. Air Force since 1992, Boeing has also become the C-17 training provider of choice for customers from the United Kingdom, Australia and Canada.

The key elements in the ATS are the Weapons Systems Trainer (WST) -- a highly realistic, full-motion simulator used for pilot training -- and the loadmaster station, which is a training device used by loadmaster students to perform preflight operations, operate aircraft systems and practice emergency procedures. The WST in Dover's ATS is the 20th to be delivered to the U.S. Air Force.

Boeing's C-17 training contract with the Air Force also includes an option for an additional WST to be delivered to Charleston AFB, S.C. If that option is exercised, it will be the fourth WST Boeing has delivered to Charleston.

"The Charleston WST will be the first Air Force trainer we deliver that has simulated avionics instead of physical aircraft avionics," said Tracy Mead, C-17 ATS program manager for Boeing. "We plan to upgrade all of the existing WSTs with this technology, which means that we will be able to return the physical avionics to the C-17 aircraft program, allowing it to increase its spares inventory."

The C-17 ATS provides instruction to more than 1,500 new pilot, co-pilot and loadmaster students each year while maintaining continuation training for more than 8,000 active, reserve and Air National Guard aircrew.

A unit of The Boeing Company, Boeing [Integrated Defense Systems](#) is one of the world's largest space and defense businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Boeing Integrated Defense Systems is a \$32.1 billion business with 71,000 employees worldwide.
