

Boeing Advanced Tactical Laser Fires High-Power Laser in Flight

Boeing Advanced Tactical Laser Fires High-Power Laser in Flight

ALBUQUERQUE, N.M., June 15, 2009 – The Boeing Company [NYSE: BA] and the U.S. Air Force on June 13 successfully fired the high-power laser aboard the Advanced Tactical Laser (ATL) aircraft for the first time in flight.

During the test, ATL took off from Kirtland Air Force Base, N.M., and fired its laser while flying over White Sands Missile Range, N.M., successfully hitting a target board located on the ground. ATL, which Boeing is developing for the U.S. Air Force, is a C-130H aircraft equipped with a chemical laser, a beam control system, sensors and weapon-system consoles.

"This successful test is a major step toward bringing directed energy capability to the warfighter," said Gary Fitzmire, vice president and program director of Boeing Directed Energy Systems. "We have demonstrated that an airborne system can fire a high-power laser in flight and deliver laser beam energy to a ground target. ATL's ultra-precision engagement capability will dramatically reduce collateral damage."

More tests are planned to demonstrate ATL's military utility. The system is designed to destroy, damage or disable targets with little to no collateral damage. These demonstrations support development of systems that will conduct missions on the battlefield and in urban operations.

The Boeing-led ATL industry team includes L-3 Communications/Brashear, which built the laser turret; HYTEC Inc., which made a variety of the weapon system's structural elements; and J.B. Henderson, which provides mechanical integration support.

Boeing leads the way in developing laser systems for a variety of Air Force, Army and Navy applications. These include the Airborne Laser, the Free Electron Laser, the High Energy Laser Technology Demonstrator, Laser Avenger, the Re-deployable High Energy Laser System and the Tactical Relay Mirror System.

A unit of The Boeing Company, Boeing [Integrated Defense Systems](#) is one of the world's largest space and defense businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Boeing Integrated Defense Systems is a \$32 billion business with 70,000 employees worldwide.
