### **Boeing Hosts Global Educators on Weeklong Space Journey**

---

**CHICAGO, July 6, 2009** -- The Boeing Company [NYSE: BA] this week brought more than 75 teachers from around the world to the 18th Annual Boeing Educators to Space Camp program at the U.S. Space & Rocket Center in Huntsville, Ala.

The Boeing Educators to Space Camp program uses space exploration initiatives to enhance teachers' skills in presenting math, science and technology lessons that will inspire students and help build a skilled work force for a globally competitive technology market.

"We want to work with the world's educators to inspire students and use space exploration as a way to help spark their interest in math and science," said Rick Stephens, Boeing senior vice president of Human Resources and Administration. "By sponsoring Educators to Space Camp, Boeing is helping the students of today become the citizens of the future and the next generation of scientists, engineers and space explorers."

The teachers will complete hands-on workshops that include simulated space missions, astronaut training, and presentations by rocketry and space-exploration experts. The workshops help bring the excitement of real-world engineering challenges to levels suitable for students to achieve a better understanding of scientific and mathematic principles. The teachers also will receive resources to implement in the classroom to help their students meet national standards for science, math and technology.

Boeing worked with U.S. and international education institutions in the selection of more than 75 applicants from 10 countries for the weeklong course. Since 1992, nearly 700 teachers have participated in Boeing's annual program, reaching an estimated 30,000-plus students around the world.

Boeing's support of Space Camp aligns with the company's community investment focus area in primary-secondary education, which promotes the professional development of teachers and provides them with the tools and resources they need to help improve student performance.

"Space Camp provides a hands-on learning environment where the excitement of science, math and technology are explored and practiced through the mysteries and wonders of space," said Katrine Balch, director of Education at the U.S. Space & Rocket Center. "For educators, Space Camp provides a place to become a learner again and to join with other educators who share the same passions for teaching and learning."

After graduating from Space Camp on July 11, each teacher will return home with CD-ROMs filled with lesson plans and additional program materials to use in the classroom. The graduates also will receive information for online educator resources to facilitate continued networking with their fellow camp attendees. Additionally, Boeing is requiring participants to work with their school administrators to develop a plan describing how they intend to implement what they learned at the camp in their school or district.

Boeing is the world's leading aerospace company and the largest manufacturer of commercial jetliners and military aircraft combined. Additionally, Boeing designs and manufactures rotorcraft, electronic and defense systems, missiles, satellites, launch vehicles and advanced information and communication systems. As a major service provider to NASA, Boeing operates the Space Shuttle and International Space Station. The company also provides numerous military and commercial airline support services. Boeing has customers in more than 90 countries around the world and is one of the largest U.S. exporters in terms of sales.
