

Boeing Team Delivers C-130H Aerial Refueling Tanker to Japan

GIFU, Japan, April 20, 2010 -- The Boeing Company [NYSE: BA] and partners Kawasaki Heavy Industries (KHI) and Cobham Mission Systems today announced that they have delivered a C-130H aerial refueling tanker to the Japan Air Self-Defense Force (JASDF). The JASDF took delivery in late February at KHI Gifu Works after the aircraft completed modification and acceptance for testing at the KHI facility in Gifu.

KHI modified the C-130H, originally designed as a transport aircraft, to incorporate Cobham air-to-air refueling pods and Boeing design modifications affecting the structure, wiring and fuel system. The tanker currently provides aerial refueling for the UH-60J, a search and rescue helicopter. It now will move into operational testing with the JASDF.

"The Boeing Company has more than 80 years of experience in aerial refueling, and each member of our team feels great pride carrying on that tradition for the Japan Air Self-Defense Force," said Ken Hill, Boeing director of Special Operations Programs. "To work with people who have such dedication and commitment is an honor."

A unit of The Boeing Company, [Boeing Defense, Space & Security](#) is one of the world's largest defense, space and security businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Boeing Defense, Space & Security is a \$34 billion business with 68,000 employees worldwide.
