

Boeing Space and Intelligence Systems Achieves CMMI Maturity Level 3

Boeing Space and Intelligence Systems Achieves CMMI Maturity Level 3

EL SEGUNDO, Calif., June 15, 2010-- Boeing [NYSE: BA] announced today that the company's Space and Intelligence Systems (S&IS) division has received a Maturity Level 3 recertification of the Capability Maturity Model Integration (CMMI) for hardware and systems development.

"This CMMI Level 3 rating is a significant accomplishment, given that less than 2 percent of organizations with more than 2,000 employees are able to achieve that level," said Craig Cooning, S&IS vice president and general manager. "Boeing's S&IS organization includes more than 5,000 employees."

The Level 3 rating indicates that S&IS has successfully met the CMMI global benchmark to define the quality processes critical to its manufacturing performance. It confirms that the division's business processes are well characterized and effectively used to establish consistency across the organization.

A third-party team of auditors spent two weeks evaluating 2,930 documents and interviewing almost 200 engineers, business leaders and program managers before recertifying the Level 3 rating on April 23. The programs represented in the appraisal included Wideband Global SATCOM, Intelsat, the K-L series of Tracking and Data Relay Satellites, and proprietary programs.

"The CMMI Level 3 rating demonstrates Boeing's continued focus on process improvement across the enterprise and is an achievement for Space and Intelligence Systems, the first Boeing division to earn a CMMI rating using Boeing Defense, Space & Security's complete set of common processes," said Jim Schultz, S&IS director of Quality. "Best practices and common processes result in greater efficiencies, which ultimately drive down the cost of proposals and improve quality, enabling us to be as cost-competitive as possible for our customers while delivering products that continue to exceed their expectations."

CMMI is a standard used worldwide to help organizations adopt best practices for development and maintenance activities that cover the product lifecycle from conception through delivery and maintenance. CMMI is managed by Carnegie Mellon University's Software Engineering Institute, a federally funded research and development center sponsored by the U.S. Department of Defense.

A unit of The Boeing Company, [Boeing Defense, Space & Security](#) is one of the world's largest defense, space and security businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Boeing Defense, Space & Security is a \$34 billion business with 68,000 employees worldwide.
