

Boeing-built X-37B Orbital Test Vehicle Successfully Completes 1st Flight

Boeing-built X-37B Orbital Test Vehicle Successfully Completes 1st Flight

VANDENBERG AIR FORCE BASE, Calif., Dec. 3, 2010-- Boeing [NYSE: BA] today announced the successful de-orbit and landing of the Orbital Test Vehicle (OTV), also known as the X-37B, for the U.S. Air Force Rapid Capabilities Office (RCO). The X-37B landed at 1:16 a.m. Pacific time today, concluding its more than 220-day experimental test mission. It was launched from Cape Canaveral Air Force Station, Fla., on April 22.

The X-37B is the United States' first unmanned vehicle to return from space and land on its own. Previously, the space shuttle was the only space vehicle capable of returning to Earth. The success of this inaugural mission demonstrates that unmanned space vehicles can be sent into orbit and safely recovered.

"We congratulate the Air Force Rapid Capabilities Office and the 30th Space Wing at Vandenberg Air Force Base on the success of this mission," said Paul Rusnock, Boeing vice president of Experimental Systems and program director for the X-37B. "This marks a new era in space exploration, and we look forward to the launch of the second vehicle in 2011. By combining the best of aircraft and spacecraft into an affordable, responsive unmanned vehicle, Boeing has delivered an unprecedented capability to the RCO."

The X-37B program is demonstrating a reliable, reusable unmanned space test platform for the Air Force. Its objectives include space experimentation, risk reduction, and concept-of-operations development for reusable space vehicle technologies that could become key enablers for future space missions.

Boeing's commitment to this space-based unmanned vehicle spans a decade and includes support to the Air Force Research Lab's X-40 program, NASA's X-37 program, and the Defense Advanced Research Projects Agency's X-37 Approach & Landing Test Vehicle (ALTV) program.

Boeing program management, engineering, manufacturing, test and mission support functions for the OTV program are conducted at Boeing sites in Huntington Beach, Seal Beach, and El Segundo, Calif.

A unit of The Boeing Company, [Boeing Defense, Space & Security](#) is one of the world's largest defense, space and security businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Boeing Defense, Space & Security is a \$34 billion business with 68,000 employees worldwide. Follow us on Twitter: [@BoeingDefense](#).
