

Boeing Completes Preliminary Design Review for Inmarsat-5 Satellites

Boeing Completes Preliminary Design Review for Inmarsat-5 Satellites

EL SEGUNDO, Calif., March 9, 2011 -- Boeing [NYSE: BA] today announced that it has completed the Preliminary Design Review (PDR) for the Inmarsat-5 spacecraft and hosted payloads. Boeing is building three Ka-band satellites to add to Inmarsat's current mobile satellite services fleet.

The PDR was a comprehensive review that validated Boeing's design approach to the physical and functional requirements of the spacecraft. The review is the first step toward confirming that the satellites will operate effectively on orbit. The first spacecraft is expected to launch in 2013.

"Boeing's unmatched commercial satellite heritage and Ka-band satellite communications experience allowed us to rapidly conduct a successful PDR that met Inmarsat's requirements," said Craig Cooning, vice president and general manager of Boeing Space & Intelligence Systems. "The satellite design is sound, and the PDR demonstrates progress toward developing these high-power Ka-band satellites to deliver streaming data and communications wherever and whenever needed."

Successful completion of the PDR allows Boeing to proceed to the Critical Design Review (CDR), the final step before the company begins to assemble the satellite. The CDR is expected to be completed this fall.

Inmarsat, the leading provider of global mobile satellite communications services, signed a contract with Boeing in August 2010 for three 702HP spacecraft to provide its new Ka-band global and high-capacity satellite services. The new satellites will join Inmarsat's fleet of 11 geostationary satellites that provide a wide range of voice and data services through an established global network of distributors and service providers.

A unit of The Boeing Company, [Boeing Defense, Space & Security](#) is one of the world's largest defense, space and security businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Boeing Defense, Space & Security is a \$32 billion business with 66,000 employees worldwide. Follow us on Twitter: [@BoeingDefense](#).
