Boeing Receives Contract for 1st Major Upgrades to Malaysian F/A-18D Hornets

Upgrades will deliver enhanced capability for Royal Malaysian Air Force fleet to remain effective, interoperable with allies and operationally relevant

Contract covers navigation, targeting and situational awareness enhancements and associated training for RMAF maintenance and air crews

LANGKAWI, Malaysia, Dec. 7, 2011 – The Boeing Company [NYSE: BA] on Nov. 28 received a U.S. Navy contract under the Foreign Military Sales Program to provide the first major upgrades for the Royal Malaysian Air Force (RMAF) fleet of eight F/A-18D Hornet fighter aircraft.

The contract covers design, development and installation of retrofit kits that will provide enhanced navigation, targeting and situational awareness. The upgrade program includes:

- GPS improvements
- A color, moving-map cockpit display
- Identification Friend or Foe Interrogation capabilities
- Addition of the Joint Helmet Mounted Cueing System
- Maintenance and air crew training for these systems.

“These upgrades will deliver enhanced capability for the RMAF fleet to remain effective, interoperable with allies and operationally relevant for years to come,” said Julie Praiss, Boeing Global Services & Support director of Tactical Aircraft & Weapons Support. “Boeing looks forward to our continued partnership with the Royal Malaysian Air Force and the U.S. Navy to ensure that these F/A-18Ds continue to serve Malaysia’s strike and interdiction mission needs.”

The upgrades also make the RMAF’s F/A-18Ds more compatible with the F/A-18E/F Super Hornet, which Boeing is offering to meet Malaysia’s Multi-Role Combat Aircraft needs.

The government of Malaysia ordered eight F/A-18D Hornets in 1993. Since delivering all aircraft on schedule in 1997, Boeing has been providing sustainment support for the fleet at the RMAF base in Butterworth, Malaysia. These support programs include engineering and logistics support, pilot training and technical publications.

Boeing provides life-cycle support solutions, services and upgrades for F/A-18 Hornet fleets worldwide, including for the U.S. Navy and Marine Corps, the Royal Australian Air Force, the Royal Canadian Air Force, the Finnish Air Force, the Kuwait Air Force, the Spanish Air Force, the Swiss Air Force and the RMAF.

The combat-proven F/A-18 Hornet is a twin-engine, multi-mission, tactical aircraft. It converts between air-to-air fighter missions and air-to-ground strike missions while on the same sortie with the flick of a switch. Currently serving the armed services of eight nations, the Hornet can be used for fighter escort, suppression of enemy air defenses, reconnaissance, forward air control, close air support, and day and night strike missions.

A unit of The Boeing Company, [Boeing Defense, Space & Security](#) is one of the world's largest defense, space and security businesses specializing in innovative and capabilities-driven customer solutions, and the world’s largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Boeing Defense, Space & Security is a \$32 billion business with 63,000 employees worldwide. Follow us on Twitter:
