

Boeing 787 Dreamliner Lands in Mexico City for World Tour Stop

- Aeromexico executives, employees, and special guests experience passenger-pleasing interior

MEXICO CITY, March 7, 2012 [PRNewswire/](#) -- Boeing's (NYSE: BA) 787 Dreamliner landed for the first time in Mexico City today as part of its World Tour. Over the next day-and-a-half, Aeromexico executives, employees, and special invited guests will get a chance to tour and experience much of the airplane's cutting-edge technological advancements.

Aeromexico was the first carrier in Latin America to commit to the Dreamliner when it announced it would lease three 787s from ILFC in June 2006 and then the first carrier in the region to order the airplane with a firm order for two Dreamliners in August of that same year.

This is the airplane's first visit to Mexico City - the world's third largest metropolitan area. Sitting higher than 7,300 ft (2,225 meters), Mexico City has always played an integral part in Boeing's flight test programs for high altitude testing.

The airplane, ZA003, was originally used for flight testing but has been elegantly refurbished to showcase the standard capabilities and features of the 787 including an interior that highlights the many passenger-preferred features of the airplane.

Made from composite materials, the Boeing 787 Dreamliner is the first mid-size airplane capable of flying long-range routes and will allow airlines to open new, non-stop routes preferred by the traveling public. As a result of innovative technologies, the airplane offers unparalleled operating economics, fuel efficiency and passenger comfort. More than 800 787s are on order by more than 60 carriers, a testament to the airplane's unique capabilities.
