

Boeing and JVC Add More Realism to Military Training Simulation

Boeing and JVC Add More Realism to Military Training Simulation

Boeing Constant Resolution Visual System incorporates JVC e-Shift 8K projectors to provide highest level of pilot immersion

Enhanced solution on display this week at I/ITSEC

ORLANDO, Fla., Dec. 3, 2012-- This week at the 2012 Interservice/Industry Training, Simulation and Education Conference (I/ITSEC) in Orlando, Boeing [NYSE: BA] is demonstrating new technology with its Constant Resolution Visual System (CRVS) that allows the system to deliver almost four times the resolution of high definition for more realistic and effective military training.

JVC's new e-Shift 8K projection technology brings CRVS' visual acuity closer to 20/20 while keeping the system's projector small and affordable. It nearly doubles a projector's resolution horizontally and vertically, approaching 8K performance from a 4K device.

"CRVS previously provided the highest-resolution, lowest-cost solution on the market," said Barry Kuhlmann, Visual Systems engineering manager at Boeing. "Now, with JVC e-Shift 8K projectors, CRVS has taken another leap forward in visual performance and fidelity to better prepare military pilots by allowing them to train in a more realistic yet safe environment."

"We believe that image quality counts, whether it's for entertainment, education or next-generation flight training," said Rod Sterling, chief engineer, JVC Technology Center. "We designed our e-Shift 8K projector to register down to 1/16th pixel accuracy to provide the unparalleled clarity and sharpness that Boeing customers demand."

CRVS provides constant target visibility throughout the entire field of vision by surrounding the pilot and cockpit in an eggshell-like environment that visually transforms into cities, landscapes and complex combat scenarios. JVC e-Shift 8K projectors further enhance the training experience and enable pilots to identify targets at real-world ranges.

CRVS is compatible with a wide range of fast jet and rotary-wing cockpits and aviator night vision goggles, and easily integrates with current and future head-mounted displays. Existing CRVS customers can upgrade to JVC e-Shift 8K without modifying screens or structure.

JVC Professional Products, located in Wayne, N.J., a division of JVC Americas Corp., is a leading manufacturer and distributor of a complete line of broadcast and professional equipment. More information is available at pro.jvc.com/visualization.

A unit of The Boeing Company, [Boeing Defense, Space & Security](#) is one of the world's largest defense, space and security businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Boeing Defense, Space & Security is a \$32 billion business with 61,000 employees worldwide. Follow us on Twitter: [@BoeingDefense](#).
