

Boeing to Build All-Electric Propulsion Satellite for SES

Boeing to Build All-Electric Propulsion Satellite for SES

Luxembourg-based company is third commercial customer for Boeing 702SP (small platform) satellite

EL SEGUNDO, Calif., Feb. 16, 2015 – Boeing [NYSE: BA] will build for SES S.A. [Euronext Paris and Luxembourg Stock Exchange: SESG] a new, all-electric 702SP satellite that will enable SES' airline customers to provide in-flight entertainment and WiFi over North America, Central America and the Caribbean.

This is the 12th satellite in more than 25 years that Luxembourg-based SES has ordered from Boeing, and the first of the all-electric propulsion satellites.

"The procurement of SES-15 will strengthen our position in the important North American government and mobility markets," said Martin Halliwell, chief technical officer, SES. "The hybrid payload with wide beams and high throughput capacity gives aeronautical, maritime and governmental customers unprecedented flexibility to develop next generation data services."

Boeing will build SES-15 in El Segundo. The satellite, scheduled for delivery in 2017, will include up to an 8 kW payload.

"We designed the 702SP satellite to meet our customer's mission requirements as efficiently as possible by reducing the spacecraft mass to take advantage of low cost launch vehicles while maximizing the revenue-generating capability of the payload," said Mark Spiwak, president, Boeing Satellite Systems International, Inc.

SES-15 will be a Ku- and Ka-band satellite.

A unit of The Boeing Company, [Defense, Space & Security](#) is one of the world's largest defense, space and security businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Defense, Space & Security is a \$31 billion business with 53,000 employees worldwide. Follow us on Twitter: [@BoeingDefense](#).
