Boeing Statement on Ground Based Strategic Deterrent Request for Proposal

HUNTSVILLE, Ala., Oct. 11, 2016 – The Boeing Company responded today to the U.S. Air Force solicitation for the Ground Based Strategic Deterrent (GBSD) Technology Maturation & Risk Reduction (TMRR) contract, to partner with the U.S. Air Force to provide a safe, secure and effective intercontinental ballistic missile (ICBM) system to deter emerging, modern nuclear threats.

Boeing's expertise in ICBM design, development and production has influenced a GBSD concept that is readily capable and affordable. Boeing created the Minuteman ICBM in 1958, and we are ready to again offer an ICBM that will meet the Air Force mission requirements through 2075.
