

Boeing and U.S. Government Launch Initiative to Advance Sustainable Aviation Fuel among APEC Economies

- U.S. Department of Transportation, FAA and Boeing to collaborate with APEC economies towards developing SAF to increase access to supply for use by region's airlines

- Sustainably produced jet fuel, which reduces lifecycle CO₂ emissions as much as 85% compared to petroleum, is essential to reducing aviation's climate impact

- Initiative supports ICAO goal of net-zero carbon emissions by 2050

SAN FRANCISCO, Nov. 16, 2023 /PRNewswire/ -- Boeing and the United States are launching an initiative to catalyze the development and use of Sustainable Aviation Fuel (SAF) among Asia-Pacific Economic Cooperation (APEC) member countries. SAF, which significantly reduces the lifecycle carbon emission of jet fuel, is key to achieving goals set by the International Civil Aviation Organization (ICAO) and the civil aviation industry to achieve net-zero carbon emissions by 2050.

SAF certified for use today can reduce lifecycle CO₂ up to 85% and holds the greatest potential to reduce aviation's emissions over the next 30 years, but the key challenges to greater use are a limited supply and high cost. Airlines' current use of SAF represents 0.1% of global jet fuel demand.

Aiming to support APEC economies' efforts to develop SAF supply, the U.S. Department of Transportation and the Federal Aviation Administration (FAA), will partner with Boeing to sponsor this project in APEC's Transportation Working Group. The initiative will address potential challenges for APEC economies in creating and growing nascent SAF markets, including:

- Identifying the availability of sustainable feedstocks for SAF
- Analyzing new pathways to optimize SAF production
- Leveraging existing industries and infrastructure for SAF production
- Enabling the development of SAF-specific policies for production and use
- Exploring SAF accounting mechanisms, including book and claim

This initiative will enhance the SAF ecosystem across the APEC region by capturing best practices and case studies from economies with more developed SAF markets while providing guidance and support to economies seeking to establish new SAF markets and enabling a policy toolkit to ensure regional cohesion in SAF policies and regulations.

"Industry studies and data tell us that SAF is essential to meet aviation's net zero commitment, but we need more of it," said Chris Raymond, Boeing Chief Sustainability Officer. "This initiative helps deepen the partnerships that we have had for years with several countries to advance SAF. We will foster collaboration and knowledge exchange among APEC economies, all in pursuit of a safe, and more sustainable aviation future."

The agreement builds on Boeing's work to help scale SAF globally through industry partnerships and policy advocacy, investments in product compatibility work and Boeing's own purchase of millions of gallons of SAF for its commercial operations. Recent Boeing initiatives to advance SAF include:

- Partnering with the APEC Secretariat to deliver a series of 'sustainable aviation' regional webinars on SAF.
- [Collaboration](#) with Zero Petroleum for testing and analyzing the next generation of technologies to accelerate the supply of SAF.
- [Collaboration](#) with the Roundtable on Sustainable Biomaterials to explore SAF feedstock opportunities in Southeast Asia, Ethiopia, South Africa and Brazil.
- Joining the [ACT FOR SKY](#) organization in Japan to work on the commercialization, promotion and expansion of domestically produced SAF.
- Mobilizing our supply chain to complete the testing necessary to ensure Boeing commercial airplanes are [100% compatible](#) by 2030.
- [Recently joining](#) the World Energy Council to drive sustainable energy transitions.
- Since 2022, Boeing has [purchased](#) 7.6 million gallons of SAF for its U.S. commercial airplane operations.

As a leading global aerospace company, Boeing develops, manufactures and services commercial airplanes, defense products and space systems for customers in more than 150 countries. As a top U.S. exporter, the company leverages the talents of a global supplier base to advance economic opportunity, sustainability and community impact. Boeing's diverse team is committed to innovating for the future, leading with sustainability, and cultivating a culture based on the company's core values of safety, quality and integrity.
