

Boeing Delivers Final Focused Lethality Munition to US Air Force

All deliveries of low-collateral-damage munition on time and on cost

ST. CHARLES, Mo., Dec. 19, 2013 – Boeing [NYSE: BA] delivered the 500th Focused Lethality Munition (FLM) to the U.S. Air Force this month, completing the contract for the low-collateral-damage weapon 100 percent on time and on cost.

“This Direct Attack FLM team not only delivered to our customer with remarkable efficiency, but also provided an important tool to protect the lives of U.S. and coalition forces around the world,” said Gary Rodenberg, Small Diameter Bomb program manager for Boeing.

FLM, a derivative of the Small Diameter Bomb, uses a multiphase-blast explosive compound along with a carbon-fiber-composite warhead case to minimize fragmentation, as well as an anti-jam Global Positioning System aided by inertial navigation. The guided weapon provides a standoff range of more than 60 nautical miles to protect aircrews engaging threats in combat. The Air Force has dropped 23 FLMs in combat operations and has a 23 for 23 mission-success rate.

A unit of The Boeing Company, [Boeing Defense, Space & Security](#) is one of the world's largest defense, space and security businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Boeing Defense, Space & Security is a \$33 billion business with 58,000 employees worldwide. Follow us on Twitter: [@BoeingDefense](#).
