

Boeing to Provide Maintenance Training Devices for US Navy P-8A Poseidon

Boeing to Provide Maintenance Training Devices for US Navy P-8A Poseidon

Contract includes replica components and high-fidelity simulators

NAVAL AIR STATION JACKSONVILLE, Fla., April 7, 2014-- Boeing [NYSE: BA] will broaden its support for the U.S. Navy's fleet of Boeing P-8A Poseidon maritime surveillance aircraft through a recent order for maintenance simulators.

The Navy plans to begin using six virtual trainers, one ordnance load trainer and 14 hardware-based devices to train P-8A maintenance personnel at Naval Air Station Jacksonville starting in 2016.

"As the manufacturer of the P-8A aircraft, Boeing offers unmatched expertise that translates directly into fleet readiness," said Mark McGraw, vice president of Training Systems and Government Services for Boeing Defense, Space & Security.

The virtual maintenance training devices provide interactive, high-fidelity simulations based on actual mission systems software, while the hardware-based trainers are full-scale replicas of aircraft components.

Boeing has previously delivered several aircrew training devices for the P-8A, which is based on the Next-Generation Boeing 737-800 commercial aircraft. The Navy plans to purchase 117 to replace its fleet of P-3 aircraft, and Boeing has delivered 13 to date.

A unit of The Boeing Company, [Boeing Defense, Space & Security](#) is one of the world's largest defense, space and security businesses specializing in innovative and capabilities-driven customer solutions, and the world's largest and most versatile manufacturer of military aircraft. Headquartered in St. Louis, Boeing Defense, Space & Security is a \$33 billion business with 57,000 employees worldwide. Follow us on Twitter: [@BoeingDefense](#).
