Boeing Supports U.S. Environmental Protection Agency Final CO2 Rule for Aircraft Emissions

WASHINGTON, D.C., Dec. 28, 2020— Boeing [NYSE: BA] today released the following statement:

“We are proud that the EPA took this step to finalize the ICAO CO2 standard for aircraft emissions. This is vital for protecting the environment and supporting the sustainable growth of commercial aviation and the United States economy. The EPA’s standard will help tackle climate change and ensure that Boeing products will meet the same requirements as our competitors around the world. The standard is one of the essential pillars of the industry’s strategy to cut net global aviation emissions to half of what they were in 2005 by 2050. Aviation is one of only two industrial sectors that has adopted global CO2 goals, underscoring our steadfast commitment to our communities and the planet.”

Boeing is the world’s largest aerospace company and leading provider of commercial airplanes, defense, space and security systems, and global services. As the top U.S. exporter, the company supports commercial and government customers in more than 150 countries and leverages the talents of a global supplier base. Building on a legacy of aerospace leadership, Boeing continues to lead in technology and innovation, deliver for its customers and invest in its people and future growth.
