

Boeing Debuts High-Throughput Small Satellite Production Facility

Boeing Debuts High-Throughput Small Satellite Production Facility

- 30,000 square-foot facility (2,787 square meters) is housed in world's largest satellite factory where Boeing builds advanced space and communications systems for commercial and government customers

- Powered by Boeing subsidiary Millennium Space Systems, virtually every aspect of satellite manufacturing will be accomplished in the new production facility

EL SEGUNDO, Calif., March 30, 2022— Boeing (NYSE: BA) unveiled a new high-throughput small satellite production, integration and test facility designed for efficiency and rapid delivery timelines. Housed in the world's largest satellite factory, Boeing's 1-million-square-foot El Segundo facility (92,903 square meters), the small satellite production line will be powered by Boeing subsidiary, Millennium Space Systems.

"Boeing and Millennium are bringing together Boeing's production expertise, domain knowledge, and manufacturing capacity with Millennium's agility and rapid prototyping," said Jim Chilton, senior vice president of Boeing Space and Launch. "We're scaling and growing to fulfill our customers' vision for multi-orbit constellations with demand across markets and mission sets."

The companies are applying advanced and additive manufacturing techniques, including 3D printing entire space-qualified satellite buses, to offer faster cycle times while improving performance.

"Our customers need satellites on-orbit faster than ever," Chilton said. "Much like an airplane or auto production line, we're employing lean production principles and advanced manufacturing techniques to accelerate delivery and pass on cost savings to our customers."

Millennium's team will staff the small satellite factory, bringing the subsidiary's proven processes and infrastructure, in addition to environmental test capabilities tailored to small satellites. Boeing will also provide access to extensive environmental and specialty testing capabilities that have qualified some of the most iconic spacecraft, including the first vehicle to make a fully controlled soft landing on the moon and more than 300 satellites.

"Millennium's culture is rooted in creating innovative ways to revolutionize space," said Jason Kim, chief executive officer, Millennium Space Systems. "We're bringing that culture into our facilities, rapidly building large constellations of high-performance small satellites, taking advantage of a footprint that's larger than two professional hockey rinks."

Designed to build small satellites for different security levels on the same assembly line, the digitally-defined small satellite factory incorporates model-based systems engineering, digital design engineering, and design for manufacturability.

"Understanding security protocols and how to build secure systems is critical to national security space, and this is an area where Millennium and Boeing excel," said Kim. "We're excited to leverage this impressive capability to support our customers' critical missions."

Initial operating capability took place in September 2021, and the small sat factory's full operational capability is expected in late 2022.

Millennium Space Systems, a Boeing Company, delivers high-performing prototype and constellation solutions across advanced national security and environmental observation missions. Founded in 2001, the company's small satellite missions support government, civil and commercial space customers' needs across orbits. Learn more at www.millennium-space.com.

As a leading global aerospace company, Boeing develops, manufactures and services commercial airplanes, defense products and space systems for customers in more than 150 countries. As a top U.S. exporter, the company leverages the talents of a global supplier base to advance economic opportunity, sustainability and community impact. Boeing's diverse team is committed to innovating for the future and living the company's core values of safety, quality and integrity. Learn more at www.boeing.com.
